

FEATURES AND BENEFITS OF THE ENCASE SAF-T KIT

Features

- Wall mounted CPR case can be placed near other safety equipment AEDS, Fire Extinguishers etc...
- Clear case with highly visible marking.
- Two red locks that protect and secure all materials.
- Instructions with pictures and words.
- CPR mask placard mounted near case assists user with clear instructions for use.
- Self sealing mask forms tight seal around nose and mouth.
- State-of-the-art mask is preferred by emergency medical personnel as it can be directly connected to standard manual or mechanical breathing devices.
- Mask seal and one way valve do not allow backflow of air or fluids.

Benefits

- Virtually prevents risk of contamination due to saliva, blood or other bodily fluids that might be exchanged while providing mouth-to-mouth resuscitation. This means more people will be willing to help save a life.
- Known location, visible in times of emergency, easily accessible, valuable addition to company's safety program, saves lives!
- Wall mounted CPR case is easily identified in case of emergency and is easily checked to ensure components are present.
- Red locks are easily broken for immediate access, deters tampering and theft. Broken lock indicates unit has been used and must be checked immediately.
- Minimizes risk of confusion or misuse in times of critical emergency.
- Saves time in critical emergency situations enabling emergency medical personnel to make quick conversion to other breathing devices without adapters, i.e., ambu-bag can be used for adults as well as children and infants.
